

Amendments to the Specification:

Please replace the title with the following amended text.

**METHOD AND SYSTEM OF STORING DATA
IN INDEPENDENT MEMORIES USING PARKING**

Please replace paragraph [0003] with the following amended paragraph:

[0003] Some manufacturers have attempted to solve these problems through increased data throughput to PCs for backup and file transfer. Unfortunately, the single internal or removable memories in these devices often fail prior to back-up, due to physical shock such as dropping, or normal wear and tear. The concept of "parking," also known as "head parking," a memory device, per se, is well known, with one example being found in U.S. Patent 6,317,296. A need exists for a portable electronic device system that provides for data redundancy and easy memory upgrades without the use of a PC.
